IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/16/2008 has been entered.

Allowable Subject Matter

2. Claims 1-12, 15, 18-21, 24, 25, and 28-31 are allowed.

Regarding Claim 1, Dolman et al. (US 6,396,345), Gorcea et al. (US 7,123,897), and Romano et al. (US 5,963,607) do not teach, alone nor in combination, the combination of:

a first peak detector arranged to receive a first pair of vectors from corresponding output nodes of the filter arrangement that are approximately 180° different in phase from each other, the first peak detector configured to generate a first peak signal;

a second peak detector arranged to receive a second pair of vectors from corresponding output nodes of the filter arrangement that are approximately 180° different in phase from each other and different from the first pair of vectors, the second peak detector configured to generate a second peak signal;

a comparator arranged to receive the first peak signal and the second peak signal and generate a feedback signal;

an adder element arranged to receive the first pair of vectors and the second pair of vectors and configured to add respective vectors from the first and second pair of vectors each shifted in phase by approximately 90° from the other vector to generate corresponding adder outputs shifted in phase from the phase of the respective vectors from the first and second pair of vectors; and

a scaler configured to receive the vectors associated with each output node and attenuate the amplitude of each of the same to generate a set of scaler outputs that are substantially equal in magnitude to the adder outputs.

Regarding Claim 9, Dolman et al. (US 6,396,345), Gorcea et al. (US 7,123,897), and Romano et al. (US 5,963,607) do not teach, alone nor in combination, the combination of:

generating a first peak signal responsive to a first pair of vectors that are approximately 180° different in phase from each other;

generating a second peak signal responsive to a second pair of vectors different from the first pair of vectors, the second pair of vectors approximately 180° different in phase from each other;

generating a feedback signal responsive to the first peak signal and the second peak; and

applying each vector to an adder element and to a scaler, wherein an output of the adder element is substantially equal in amplitude to an output of the scaler.

Regarding Claim 18, Dolman et al. (US 6,396,345), Gorcea et al. (US 7,123,897), and Romano et al. (US 5,963,607) do not teach, alone nor in combination, the combination of:

means for generating a first peak signal responsive to a first pair of vectors that are approximately 180° different in phase from each other;

means for generating a second peak signal responsive to a second pair of vectors different from the first pair of vectors, the second pair of vectors approximately 180° different in phase from each other;

means for generating a feedback signal responsive to the first peak signal and the second peak signal;

means for applying each vector to an adder element; and

means for applying each vector to a scaler, wherein an output of the adder element is substantially equal in amplitude to an output of the scaler.

Regarding Claim 24, Dolman et al. (US 6,396,345), Gorcea et al. (US 7,123,897), and Romano et al. (US 5,963,607) do not teach, alone nor in combination, the combination of:

a first peak detector arranged to receive a first pair of vectors from corresponding output nodes of the filter arrangement that are approximately 180° different in phase from each other, the first peak detector configured to generate a first peak signal;

a second peak detector arranged to receive a second pair of vectors from corresponding output nodes of the filter arrangement that are approximately 180°

different in phase from each other and different from the first pair of vectors, the second peak detector configured to generate a second peak signal;

a comparator arranged to receive the first peak signal and the second peak signal and generate a feedback signal;

an adder element arranged to receive the first pair of vectors and the second pair of vectors and configured to add respective vectors from the first and second pair of vectors wherein each respective vector is shifted in phase from the other to generate respective adder outputs shifted in phase from the phase of the first pair of vectors and the second pair of vectors; and

a scaler configured to receive the vectors associated with each output node and attenuate the amplitude of each of the same to generate a set of scaler outputs that are substantially equal in magnitude to the adder outputs.
